Bivalent Poliomyelitis Vaccine Type 1 & Type 3, Live (Oral)

DESCRIPTION

The Bivalent Poliomyelitis Vaccine Type 1 & Type 3 (bOPV) contains suspensions of live attenuated Polioviruses type 1 and 3 which are administered orally. The vaccine is intended for use in children. Each dose of 2 drops (0.1 ml) contains live attenuated Polioviruses type 1 and 3.

COMPOSITION

PHARMACOLOGICAL PROPERTIES

- At recommended temperature, bOPV should be administered in a clean, dry, dust-free, and dimly lit area.
- The vaccine vial monitor (VVM), if attached, has not reached the discard point (see figure).
- The vaccine vial septum has not been submerged in water.

PHARMACODYNAMIC PROPERTIES

- The vaccine vial monitor (VVM), if attached, has not reached the discard point (see figure).
- The vaccine vial septum has not been submerged in water.

PHARMACOKINETIC PROPERTIES

- The color of the inner square of the VVM is adjacent to the outer circle.
- The vaccine vial monitor (VVM), if attached, has not reached the discard point (see figure).
- The vaccine vial septum has not been submerged in water.

PHYSICOCHEMICAL PROPERTIES

- The vaccine vial monitor (VVM), if attached, has not reached the discard point (see figure).
- The vaccine vial septum has not been submerged in water.

USE

- The vaccine vial monitor (VVM), if attached, has not reached the discard point (see figure).
- The vaccine vial septum has not been submerged in water.

DO NOT USE

- The vaccine vial monitor (VVM), if attached, has not reached the discard point (see figure).
- The vaccine vial septum has not been submerged in water.

CONTRAINDICATIONS

- The vaccine vial monitor (VVM), if attached, has not reached the discard point (see figure).
- The vaccine vial septum has not been submerged in water.
